

**REMARKS**

The requirement for restriction interposed in the present application independent and distinct the claims into two purportedly separate inventions: Group I (claims 2-4) and Group II (claims 5-9).

**Provisional Election With Traverse**

Applicant provisionally elects to prosecute the Group I claims, claims 2-4, with traverse, and without prejudice to prosecuting the Group II claims, claims 5-9, in the present application or in a later application.

**The Restriction Requirement Is Improper**

Applicant respectfully submits that the stated reason for the restriction requirement, that "Claims 2-5, drawn to a magazine bay assembly, classified in class 369, subclass 30.78" and "Claims 5-9, drawn to a drive bay, classified in class 369, subclass 30.73" is incorrect and misapprehends the claimed invention.

Claims 2-9 are dependent on generic claim 1 and hence include expressly each element recited in its base claim, generic claim 1, "the claims to the species which can be included in a case in addition to a single species must contain all the limitations of the generic claim" MPEP 806.04(d). Generic claim 1 recites "...the operator alterable space comprises a library mounting structure for receiving a module...". Claims 2-4 recite features directed to a magazine bay assembly module and claims 5-9 recite features directed to a drive bay assembly module. The subcombinations, Group I and II, are not independent and distinct inventions because one embodiment of receiving a module of claim 1 is the magazine bay assembly module of claims 2-4 and an alternative embodiment is the drive bay assembly module.

Thus, Applicant respectfully submits that the basis for the restriction requirement is erroneous, and that no showing has been made that the subcombinations are separately useable and therefore distinct from each other. MPEP 806.05(d)
